

Custom Interconnect Ltd

EMS & LED Technology Open Day Wednesday 21st April 2010

This is your opportunity to meet the production team at CIL who will take you through the latest developments in the EMS (Electronic Manufacturing Services) Sector. You may want to improve your understanding of DFM (Design For Manufacture), or you might just feel that a better understanding of the manufacturing process would help you in your daily activities and your dealings with your colleagues and suppliers.

As part of the LED focus, we will explore the current state of LED technology, modern applications of LEDs and discuss design considerations for those using LEDs as a major part of their products.

Register your interest at www.cil-uk.co.uk.

Agenda

10.00 – Registration
